

ROAD CONSTRUCTION FENCING

Policy Owner: Roads
Adoption Date:
Resolution: 91/226

Policy: R 8
Effective Date: November 19, 1991
Last Amended Date: August 21, 2018

ROAD CONSTRUCTION FENCING

Purpose

To replace or relocate existing fences after a road construction project and provide temporary fences to contain livestock that are removed during road construction.

Guidelines

1. The County will replace a functional fence that must be removed and relocated due to construction of County roads.
2. To remove or replace a fence, the County and the affected landowner or lessee will enter into a written agreement, including a limitation of liability. A landowner may be compensated to construct the fence with County supplied materials.
3. The County will only construct a new fence if it replaces an existing functional fence. A fence that is partially lying on the ground due to broken posts or missing wire will not be considered a functional fence.
4. If necessary, a temporary fence will be installed for containment of livestock until construction is completed and the permanent fence is replaced.
5. The County will typically replace the fence with 3 string or 4 string barbed wire, or materials equivalent to the original fence removed (page wire, slabs or boards).
6. If a replacement fence is not needed, the fence will be removed. Salvaged material may be delivered to the landowner or lessee.
7. The County will occasionally use wire and posts that can be economically salvaged from the existing fence to build the new replacement fence.
